

An integral part of your total patient care.

Bayer Syringes for MEDRAD® Injection Systems.

Bayer Syringes: Designed, Manufactured and Warrantied as Part of the Total Fluid Delivery System.

Bayer Syringes for MEDRAD® Injection Systems ensure optimal device performance, thereby enhancing patient safety.

Made at our facility in the United States, we have supplied over 300 million syringes to 20,000 hospitals and imaging centers worldwide – testament to the quality and trust radiology professionals have placed in Bayer Syringes.

Our goal is to continue providing syringes and disposables of the highest quality, so you can provide the best quality care to your patients.

There is No Substitute For Quality.

At Bayer, our syringes are made according to strict quality and reliability controls at every step of the production process. Only Bayer Syringes and disposable products have been specifically designed, manufactured, and validated to work reliably with corresponding MEDRAD® injection systems. As syringes are part of the total injection system, this means your injector is ready to perform even the most demanding protocols.

Designed for your MEDRAD® Injection System

Bayer Syringes are designed, tested and warranted as integral components for your MEDRAD® Injection Systems.

Strict Vendor Qualification

Each supplier has been carefully chosen, audited and certified to provide materials that completely adhere to our chemical composition and purity specifications.

Precision Manufacturing

Our US-based manufacturing facility produces syringes to extremely tight tolerances. The volume of silicone coating inside the syringe barrel is precisely controlled. This facilitates optimal device performance and accurate fluid delivery.

Robust Packaging

Every syringe package adheres to strict specifications and rigorous environmental and transportation simulation testing. This ensures your syringes arrive at your facility sterile and uncompromised.

Every Part Matters.

Nothing is more important than your patients' safety. For over 50 years, we have been dedicated to optimising every aspect of the syringe manufacturing process to ensure the highest levels of total fluid delivery performance. Bayer Syringes play an integral role in safely delivering imaging fluids to your patients. Every product is made from reliable components to help you provide high quality care.

Legally-required Medical-grade Material

Specific, medical-grade materials are selected via a strict vendor qualification process to ensure optimal injector performance and patient care.

Confirmed Biocompatibility

Our product development process and material sourcing procedures adhere to internationally required biocompatibility standards (ISO 10993), ensuring the safety profile of your syringes.

Inspection for Particulates

Bayer thoroughly inspects each and every syringe barrel for particulates. That reduces patient risk and provides an additional level of patient safety.

Maximise Performance. Minimise Risk.

At every step of the way, our products are made with your patients' care at top of mind.

Tried and Tested

Each Bayer Syringe is made to work seamlessly with your MEDRAD® Injection System, increasing your Total Fluid Delivery System reliability while minimising unnecessary repair costs.

Dependable Supply

Our supply chain exceeds target on-time shipment metrics with over 98% fulfillment rate while minimising delivery times.

Patient Care Prioritised

Every quality control check that a Bayer Syringe undertakes is a step towards ensuring total patient care. That's what makes Bayer Syringes reliable, reputable and a top choice for radiology professionals worldwide.

Bayer Syringes: Your First Choice

Syringes that are not custom designed and manufactured for your MEDRAD® Injection System as Bayer Syringes are can impact the performance of your radiology suite and commitment to patient care.

Here's why:

Lab tests performed with non-Bayer syringes found instances where the syringe is technically incompatible with the Bayer MEDRAD® injector:¹

Non-compatible syringes may deliver the incorrect dose¹.

Non-compatible syringes can fail.

Bayer cannot guarantee the performance of your injector with non-Bayer syringes and disposables².

If a syringe not manufactured by Bayer causes injector malfunction, your Bayer MEDRAD® injector warranty may be invalidated³.

**Commit to quality.
Choose Bayer Syringes: an integral
part of your Total Injection System.**
